PARROT DF7990

A real reason to send MMS messages!

Better than a postcard, send your holiday photos via MMS from your mobile phone straight to your friends' or family's living room, wherever you are. An icon will warn them on the side of the frame. All they will need to do is press a button and join you on your journey with each photo displayed on the Parrot DF7990. What is the secret behind the Parrot DF7990? A dedicated call number that lets it receive MMS messages from any mobile phone. Its ability to receive text means that you can send all your comments, which will appear directly on the frame with the photo. Once read, the text will disappear to make way for the photo.

Optional: discover all the magic of *Bluetooth* and the *NFC* technology in a single product

From the comfort of your sofa, send the photos from your mobile phone or PC and admire them as they take shape directly on the Parrot DF7990. All photos are transferred wirelessly from a distance via *Bluetooth*. More magical still - you will be surprised by the new *NFC* technology (Near Field Communication), which easily lets you connect and transfer your photos by brushing your phone past the frame. The selected photo is instantly displayed on the screen!

Share your holidays in pictures

With its 7-inch LCD screen, the Parrot DF7990 reproduces rich pictures in terms of colour and contrast, allowing you to relive all your most memorable moments. Position the frame how you want, either horizontally or vertically, and the photos will automatically be rotated. Thanks to the USB port and SD card slot, at last you can make the most of the photos stored on your PC, Mac® or digital camera by transferring them to the Parrot DF7990.

Unbridled pleasure

Easily set the time at which you want the Parrot DF7990 to switch on and off every day, there will be nothing left to do except admire your photos all day long! Or enable the automatic mode, so that the frame adapts to your lifestyle and switches off when you turn out the lights.

A modern touch for your living room

Regardless of your interior design, the Parrot DF7990 will blend in and stand out with its irresistible design and modern, yet simple finish. With its internal memory capable of storing up to 400 photos, display your favourite photos with this designer frame.

What better way to send your latest news!

USB

Bluetooth wireless technology

(optional)

The *Bluetooth* wireless technology enables voice and data to be sent via a short-distance radio link. It connects a wide range of electronic equipment without requiring additional cables. Furthermore, it extends the communication possibilities for mobile phones and a large number of devices.

NFC wireless technology

(available only with the *Bluetooth* option)

With the NFC (Near Field Communication) wireless technology, data can be exchanged intuitively and easily with security guaranteed. Communication is established by bringing two NFC-compatible electronic devices within a few centimetres of each other. NFC and *Bluetooth* can be combined to simplify the stages involved in configuring and connecting devices, making the use of both protocols completely seamless for the user. The NFC technology therefore increases the communication and application possibilities for electronic devices, while simplifying their use.

Technical and commercial specifications

PARROT DF7990

MMS and SMS digital photo frame

Specifications

7" analogue LCD screen

Resolution of 416 x 234 pixels
